

QAbstractTableModel

std::vector< commonDefine
Client::tdLogItemClient >

client::TClientModel

```
graph BT; client::TClientModel --> QAbstractTableModel; client::TClientModel --> std::vector[std::vector< commonDefine Client::tdLogItemClient >];
```

The diagram illustrates the relationship between three classes. At the bottom is a box for 'client::TClientModel'. Two blue arrows originate from this box: one points to a box labeled 'QAbstractTableModel' at the top left, and the other points to a box containing 'std::vector< commonDefine Client::tdLogItemClient >' at the top right. The 'client::TClientModel' box has a thick black border and a light gray fill, while the other two boxes have thin black borders and white fills.
