

QAbstractTableModel

std::vector< commonDefine
Server::tdLogItem >

TServerLogModel

```
classDiagram
    class QAbstractTableModel
    class TServerLogModel
    class LogItems["std::vector< commonDefineServer::tdLogItem >"]
    TServerLogModel --|> QAbstractTableModel
    TServerLogModel --> LogItems
```

The diagram illustrates the relationship between three classes. At the bottom is the **TServerLogModel** class, which is shaded gray. Two blue arrows point upwards from it: one to the **QAbstractTableModel** class on the left, and another to a data structure on the right. The data structure is a `std::vector` containing `commonDefineServer::tdLogItem` objects. The top two boxes are white with gray borders, while the bottom box is gray with a black border.
